## Thank you for buying a scanButler

The scanButler helps you to scan documents with your smartphone or tablet - simply and without blurring.

To use the scanButler, you simply have to open and set it up. 1 - 2 - 3 - finished.

To prevent the smartphone from wobbling or slipping, the support surface is covered with a soft foam (4).

The scanButler can be wiped off with a damp cloth.

Place the documents approximately in the middle of the dark surface (5). Most scanning apps automatically cut documents to A4 size.

## Adjusting the angle

The angle can be easily corrected if it is no longer correct. Loosen the screws and press the support. Fix the screw again.
